

ColdLogik CL21 Rear Door Heat Exchanger

ColdLogik Rear Door Heat Exchangers are established as highly efficient cooling systems for use on data center/ server racks. Designed to operate on a closed loop water circuit, ensuring optimum thermal and energy performance by removing heat generated by the active equipment directly at source.

The ColdLogik CL21 Smart Passive is designed to provide high performance cooling with Zero operational costs. The performance is entirely dependent on the active equipment inside the cabinet, and the available static pressure. At 14° C / 57.2°F Water inlet, the CL21 Smart Passive is able to supply up to 29kW of cooling. Ideal for a data centre targeting a highly sustainable operating structure.

Performance Examples

Performance examples — these examples show the RDHx duties attainable when the active equipment inside the rack produces varying volumes of airflow. Other performance duties are attainable when calculating bespoke project specific requirements.

CL21 Smart Passive Cooling Capacity							
Performance Data for:		42U / 47U / 52U					
DB Air On	°C (°F)	40 (104)					
Water In	°C (°F)	14 (57.2)

Cooling capacity data is shown for illustration purposes. USystems work alongside their customers who largely have unique challenges and ambitions. The nature of our technology, capabilities and approach is emulated in the delivery of efficient designs and solutions across the globe.

Legend

DB - Dry Bulb

ΔT - Delta T / difference supply and return temperatures

Air On - Air onto coil / air off active equipment

Air Off - Air off coil / air out from ColdLogik cooler
